

Content Principles

Stewarded by the non-profit GEO Sustainable Golf Foundation, in collaboration with a network of organisations and specialists, The Sustainable Golf Knowledge Centre brings together real-world examples, credible research and practical resources from around the world. This includes highlights, case studies, academic papers, industry reports, guidance, tools and toolkits.

Our aim is simple: to help people learn, understand and take positive action.

WHAT WE INCLUDE ---

All content is screened before publication. To be considered, it must:

- Relate directly to one or more Sustainable Golf themes.
- Offer clear learning, credible evidence or practical value.
- Come from an identifiable and trusted source.
- Clearly state the authors, organisations and funding involved.
- Present information responsibly and support claims with evidence or experience.
- Be clear and useful to an international golf audience.

We do not include advertising or marketing materials. Commercially funded research or technical resources may be considered only when the funding is clearly stated and the content provides genuine evidence or practical value.

HOW WE REVIEW CONTENT ---

Our review reflects the type and source of the material. Highlights and case studies are checked for a clear and credible account of the action taken and lessons learned. Research and practical resources are checked for their source, evidence, transparency and usefulness.

The Knowledge Centre is a curated platform, not an academic journal, auditor or certification body. We do not formally peer-review research or independently verify every claim.

Content may be included, referred back for more information or declined. We may also correct, update or remove a listing if information changes or concerns arise.

COPYRIGHT AND DISCLAIMER

The Knowledge Centre is stewarded by the non-profit GEO Sustainable Golf Foundation, working in collaboration with other organisations and experts who support its ongoing development, improvement and content reviews.

The Foundation does not own or claim copyright or other intellectual property rights in original works created by others. These rights remain with the relevant authors, publishers and other owners.

We publish short summaries, credit the authors and organisations, and link to the original source. This helps make academic articles more accessible to people outside the academic community and makes other useful resources easier to find. We may edit our summaries for clarity and brevity, but we do not host or alter the original work. No original work is ingested into AI engines in the process of curating content for the Knowledge Centre.

Inclusion does not represent peer review, independent verification, certification or endorsement. The Foundation cannot guarantee that external content is accurate, complete, current or suitable for every situation.

Authors, publishers and contributors remain responsible for their original content. Users must decide whether information is suitable for their needs and seek specialist advice where necessary. To the fullest extent allowed by law, the Foundation is not responsible for external content or for any decisions, actions, loss or damage arising from materials presented and their use.
